

CDI 6000-WP

WALL-PLUG POWER ADAPTOR KIT FOR CDI 6000 FLOWMETERS

- Facilitates installation where exposed wiring and a wall-plug supply are acceptable
- Provides sealed connection to meter

The wall-plug adaptor kit permits a CDI 6000-series flowmeter to be installed without a panel-mounted dc power supply. It includes an IP 68 (NEMA 250) rated jack for installation in the meter, a mating plug on a 14-foot extension cable, and a 750 mA 24 V dc wall-plug power supply. When the kit is ordered with the meter as an option, the jack is factory wired to the meter.

INSTALLATION

Install the power jack in one of the two openings in the side of the meter with the O-ring on the inside and the washer and nut on the outside. Connect the red wire to the dc+ terminal and the black wire to the dc- terminal.

SPECIFICATIONS

Electrical:

Input: 100 to 240 V ac
50 to 60 Hz

Output: 750 mA
24 V dc

Environmental:

At meter: IP 66
At wall-plug supply: not rated
