

Portable Non-Invasive Ultrasonic Flow Meter

DXN-5P

DESCRIPTION

The Dynasonics DXN-5P Portable Non-Invasive Ultrasonic Flow Meter assists with diagnosing equipment issues. Easy to install by clamping onto the outside of the pipe, the DXN-5P meter measures flow using ultrasonic sensors. The automatic selection of the best method to measure flow of clean liquids or liquids with gases or suspended solids identifies potential entrained air, which can damage pumps, valves and other equipment.

When used with RTD temperature sensors, the DXN-5P meter measures thermal energy or mass flow.

BENEFITS

By clamping onto the outside of pipes, the meter is well suited for temporary flow measurements:

- Ideal to verify existing inline flow meters
- Identify unwanted air trapped in pipes that may reduce efficiency or damage equipment
- Reduce installation cost and effort by using non-invasive technology across a variety of applications
- Avoid process interruption while pipe integrity remains intact
- Record flow and other readings over time to establish baselines and profile usage

FEATURES

- Transit time and Doppler bi-directional flow measurement
- · Battery, 12/24V DC or main powered
- Data log up to 8 parameters with time/date stamp
- Configure and troubleshoot over Bluetooth® with SoloCUE® mobile app
- Large, easy-to-read graphical display and physical buttons for harsh working environments
- · Factory calibrated according to traceable standards

APPLICATIONS

The DXN-5P meter is available with a variety of sensors that permit the user to select a meter with features suitable to meet particular application requirements.

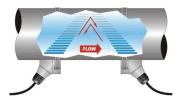

- A flow meter for water delivery, sewage, cooling water, water-glycol mixtures, alcohols and chemicals
- A heating/cooling energy flow meter used in conjunction with dual clamp-on RTDs for temperature measurement—ideal for hydronic process and HVAC applications

OPERATION

A hybrid ultrasonic flow meter automatically switches the flow reading between transit time and Doppler based on the fluid conditions. Monitoring both the transit time signal and the Doppler signal can help with diagnosing whether air, sand or debris is in the pipe.

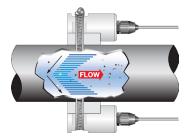

Transit time measures the time difference between the travel time of an ultrasound wave going *with* the fluid flow and *against* the fluid flow. The time difference is used to calculate the velocity of the fluid traveling in a closed-pipe system. The transducers used in transit time measurements operate alternately as transmitters and receivers. Transit time measurements are bi-directional and are most effective for fluids that have low concentrations of suspended solids and are sonically conductive.

Equipped with thermal energy capabilities, the DXN-5P meter measures the rate and quantity of heat delivered or removed from devices such as heat exchangers. By measuring the volumetric flow rate of the heat exchanger liquid, the temperature at the inlet pipe and the temperature at the outlet pipe, the energy usage can be calculated.

Doppler method measures flow by reading the frequency shift reflected from particles or gas bubbles in the fluid. For example, the faster particles are moving towards the transducers, the higher the frequency of the reflected ultrasonic wave. Doppler measurements are bi-directional and are most effective for fluids that have suspended solids or gases.

Both transit time and Doppler methods calculate the flow rate from the velocity and inner diameter of the pipe.

Product Data Sheet

Transducers

Transducers include required cables with connectors for easily connecting and disconnecting the cables. One pair of triaxial cables is provided with transit time UZ, RZ and LZ transducers. One pair of coaxial cables is included with the Doppler DT94 transducers.

Model	Construction	Pipe/Tubing Sizes and Materials 1,2	Flow Rate Max. GPM (LPM)
UZ Adjustable small pipe	CPVC, Ultem®, and anodized aluminum track system; Nickel-plated brass connector with Teflon insulation; PVC cable jacket, –40…194° F (–40…90° C)	0.52 in. (1250 mm)	190 (720)
RZ Standard pipe	PBT glass filled, Ultem; PVC cable jacket; -40250° F (-40121° C)	2.512 in. (DN65DN300)	4000 (15,000)
LZ Large pipe	CPVC, Ultem, Nylon cord grip PVC cable jacket; -40194° F (-4090° C)	848 in. (DN200DN1200) ^{3, 4}	33,000 (125,000)
DT94 Doppler	CPVC, Ultem, Nylon; PVC cable jacket; -40194° F (-4090° C)	139 in. (25990 mm)	44,000 (165,000)

¹ Recommendations based on unlined, new pipes with water. Recommended pipe or tubing sizes vary with pipe conditions and fluid.

RTD Kits

Part Number	Description	Installation	RTD Type	Construction	Temperature Range	
70472-001	RTD pair; 20 ft (6 m) cable	Pipe clamp,	Pt 1000, Class A ± (0.15 + 0.002* t)	Aluminum body,	−58356° F	
70472-001	(1D pair; 20 ft (6 ff) cable	surface mount	with t as temperature °C	silicone cable jacket	(-50180° C)	

Clamp-on RTD kits include heat sink compound and silicone stretch tape.

Pipe Wall Thickness Gauge

Part Number	Description
DWT-2	Handheld with ultrasonic sensor for steel, cast iron and PVC

² PVC, CPVC, HDPE, PTFE, PDVF, stainless steel, ductile iron, aluminum, brass naval, carbon steel copper.

³ Large pipe transducers are recommended for 8...12 in. pipes if normal velocity is expected to be greater than 12 ft/s (3.6 m/s).

⁴ Consult factory for larger pipe sizes.

SoloCUE Flow Device Manager App

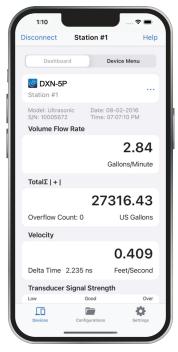

The flow meter may be programmed through the keypad or SoloCUE Flow Device Manager app for Windows, Android, iPhone or iPad. The app provides a rich set of tools and information to aid in faster equipment setup and flow system diagnosis.

SoloCUE App	Used to configure, calibrate and troubleshoot flow meters		
Operating System	Windows 8, 10 and 11; Android 14 and later; iPhone or iPad 16 and later		
Languages	English, Spanish, German, French, Portuguese, Italian, Norwegian, Swedish, Polish, Korean		
USB Cable	70361-001 USB Type-C connector to A connector, shielded, supported by SoloCUE for Windows		
Bluetooth	Supported by SoloCUE for Android, iPhone or iPad, Bluetooth 4.2 and later		

Benefits

- Use the live dashboard with readings and health information in a single view to know the status of your nearby instrumentation
- · Eliminate scrolling through the menu keypad on field instrumentation when programming multiple parameters
- View alarm descriptions and possible corrective actions without having to find a manual
- · Save a backup file of your settings and download the parameters to other devices or store for future reference
